... FOR MULTIFUNCTIONALITY
IN A NEW DESIGN!

RENO ELEMENTS

www.hess.eu/en/reno-elements

RENO ELEMENTS – the new smart lighting system from Hess!

Experience light and multifunctionality in a completely new design. The RENO ELEMENTS line reinterprets the Hess DNA – as something that is new and yet trusted and proven.

From the RENO ELEMENTS, you can expect the best light and real added value through multifunctionality – in a completely new expression of design that is minimalist and striking at the same time!

Smart light – homogeneous, efficient and intelligent.

With heights of four to six meters, the RENO ELEMENTS line precisely focuses on meeting the most varied of lighting requirements in urban areas.

Thanks to state-of-the-art LED technology, it provides light that is extremely homogeneous. And by coupling them with a variety of dimming and light management systems, you increase efficiency and intelligence while transforming RENO ELEMENTS into SMART RENO ELEMENTS!

Emphasize highlights at night – stage solitary plants, fountains, sculptures or façades. That's no problem at all with additional spotlights that are perfectly integrated into the luminaire.

RENO ELEMENTS:

Basic lighting and illumination – the epitome of smart lighting!

Smart multifunctionality – and real added value.

The RENO ELEMENTS – developed for the urban space of today and tomorrow and equipped with elements that make life and getting together with others more comfortable and convenient, increasing the attractiveness of urban spaces.

Loudspeakers, cameras, information displays, WLAN, e-mobility and external power supply create communicative, informative and interlinked living spaces. Spaces to meet, to live and to feel welcome in.

RENO ELEMENTS:

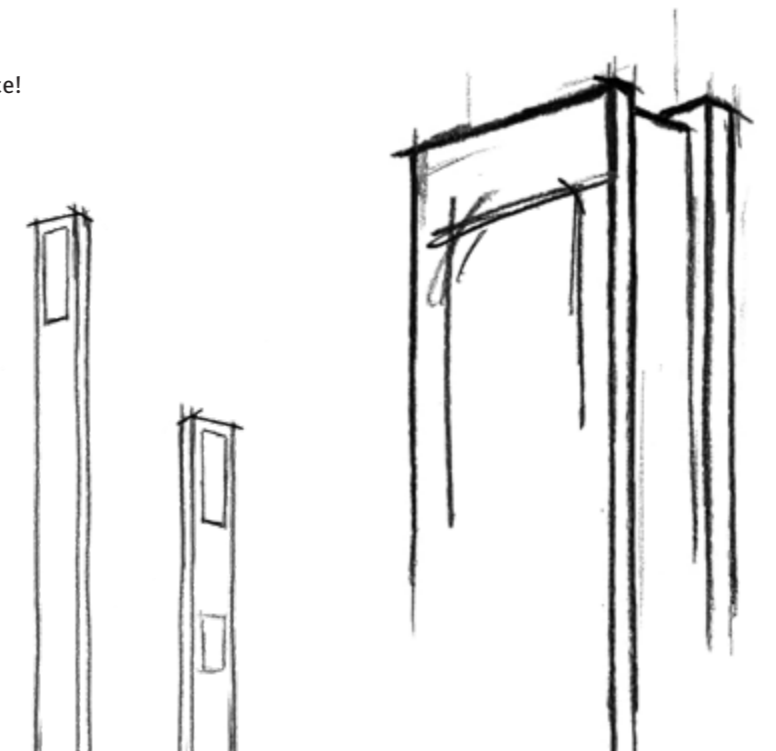

Smart multifunctionality for living spaces with real added value!

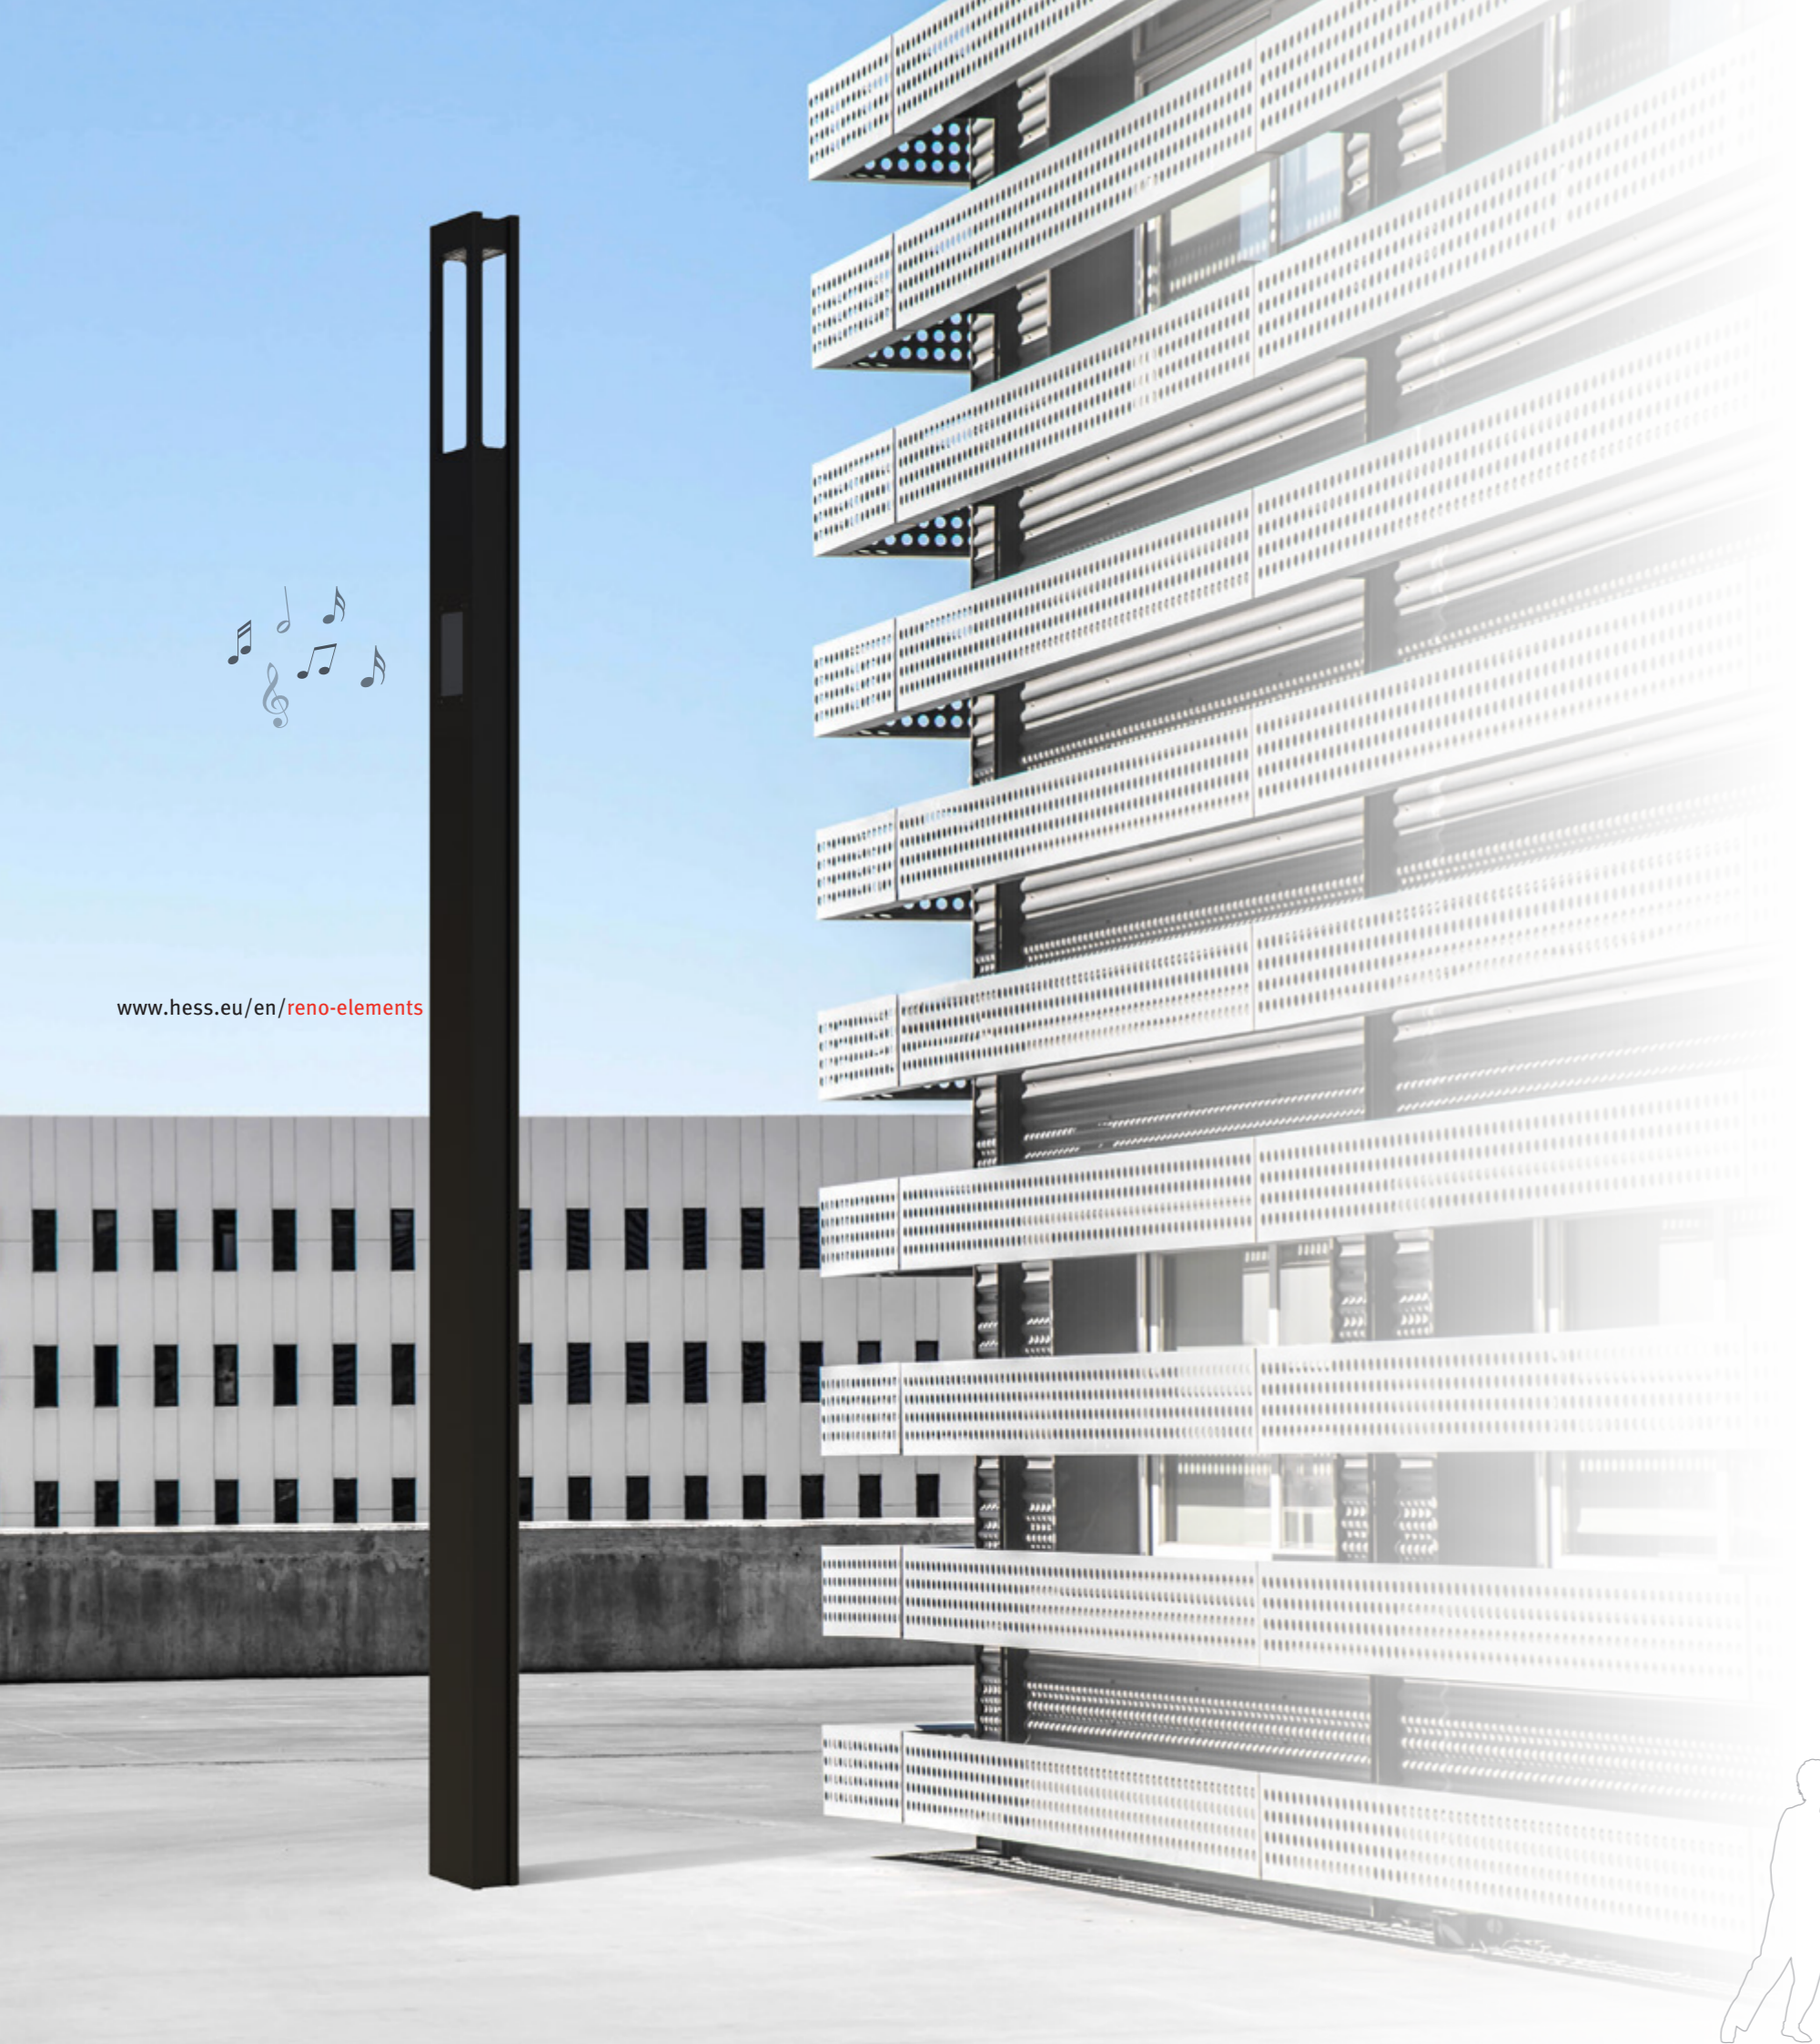

Smart design – for an impressive impact during the day.

Clear, purist, discreet. The RENO ELEMENTS line impresses with its presence. The striking rectangular design of the multifunctional luminaire creates an extraordinary daytime effect that lends distinctive character to public areas, squares, pedestrian areas and architecturally appealing buildings.

RENO ELEMENTS:

A smart appearance!

www.hess.eu/en/reno-elements

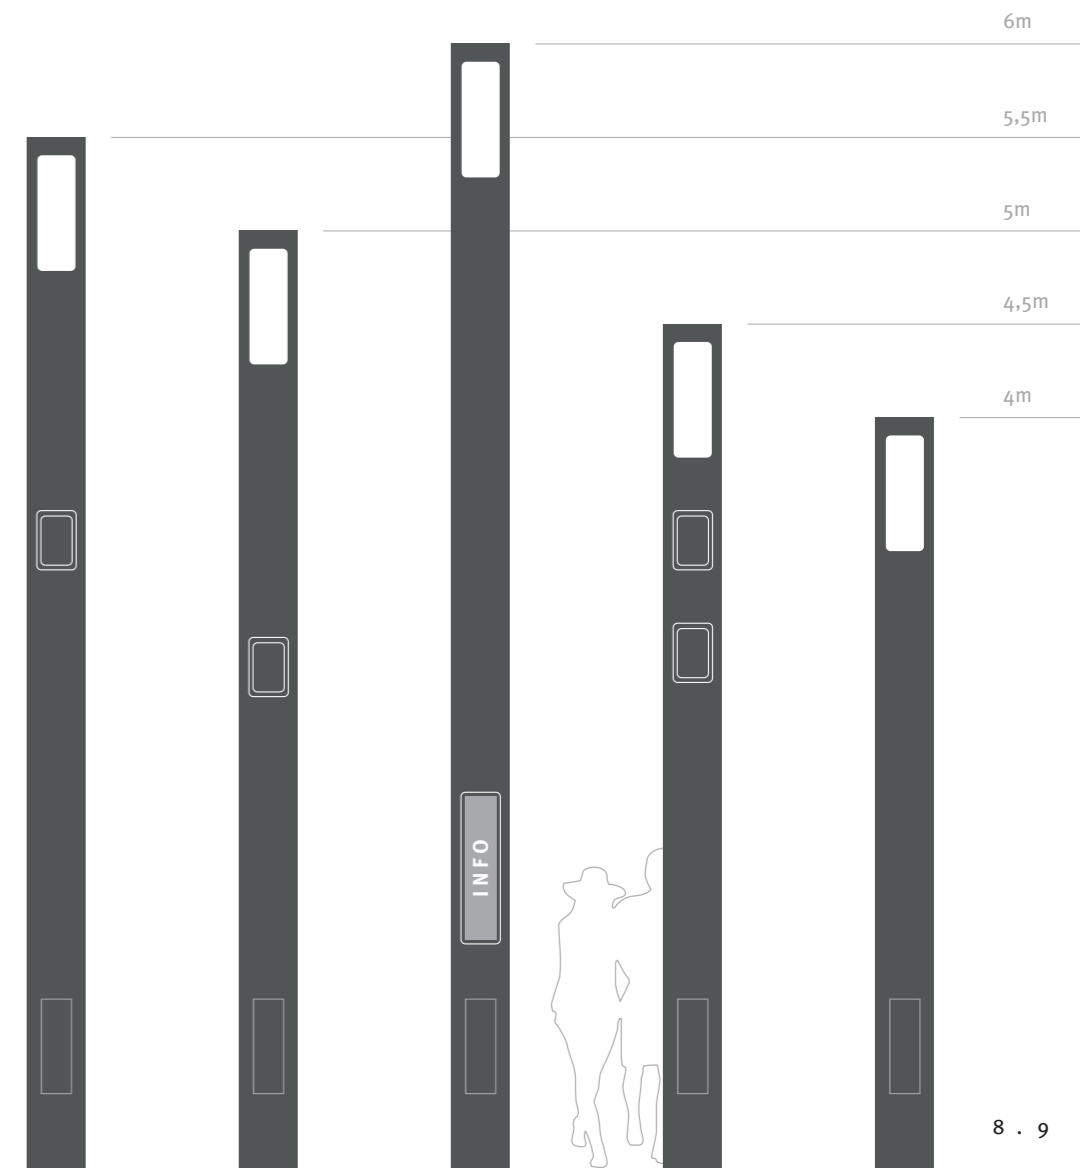

RENO ELEMENTS – a coherent design.

A luminaire as from a single piece – and you can take that almost literally. The extruded aluminium profiles are manufactured to the desired length in one piece, and the recesses for the 'Elements' are precisely cut out at the desired locations.

This results in a striking as well as elegant luminaire with perfectly integrated elements – without shadow gaps.

RENO ELEMENTS:

Light, multifunctionality and design at its best!

RENO ELEMENTS – a holistic approach.

Urban spaces. It's where you meet others and where life takes place. With RENO ELEMENTS, we lend urban spaces light, multifunctionality and design – and thereby high utility as well as recreational value.

While designing the RENO ELEMENTS, we thought about an entire product family – in terms of both lighting and site furnishings: In this sense, an illuminating bollard, a barrier bollard, a waste receptacle and a bench in matching RENO ELEMENTS style.

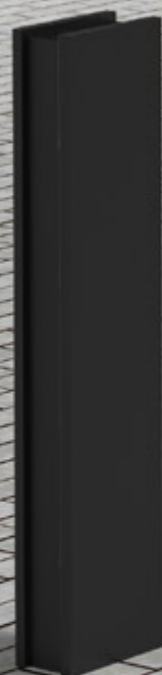

In this way urban spaces can be designed holistically.

RENO ELEMENTS:

Luminaires street and site furnishings – a very smart family!

Smart solutions by day and by night – made by Hess

Demographic change, global warming, digitalization – cities and municipalities around the world are currently facing profound challenges that demand solutions that will make them more adaptable, sustainable and liveable – in the spirit of a ‘smart city’.

‘Smart city’ – a term that is today more relevant than ever. It is based on holistic urban development concepts that use integrated networking to design diverse areas of the city and municipality – from traffic planning and control to energy supply and administration – to be more efficient and attractive.

SMART CITY

Hess designs smart cities

As a premium supplier of attractive designed outdoor luminaires and site furnishings, we support cities and municipalities on their unique pathway to becoming a ‘smart city’. We offer a comprehensive, innovative and design-oriented product and solution portfolio – true to our slogan:

We design cities – we design smart cities!

Smart light and smart multifunctionality – in three different smart designs!

Hess offers you an unparalleled selection.

Increase the attractiveness of your urban spaces with our multifunctional lighting systems. Whether with ARINI, CITY ELEMENTS or RENO ELEMENTS.

Perfection down to the last detail – just as you would expect from Hess.

ARINI

ARINI from Hess is a lighting system combining light and multifunctionality with extraordinary design inspired by nature.

As a result, ARINI taps completely new opportunities for shaping urban structures, revealing new applications in the process.
